MDS-PRAD Technologies Corporation

The 2003 edition to the PEI aerospace industry, MDS-PRAD Technologies Corporation is home to a new research and development, engineering, and production facility.

"We are looking forward to the final commissioning of our new research and development, engineering, and production facility in Slemon Park," said Phil Rodger, President of MDS-PRAD Technologies Corporation. "To date our experience in Prince Edward Island has been very positive. Support from the provincial and federal governments has been superb and our employees have responded well to every challenge we have faced."

The company has a protective coating that prevents premature wear and erosion of compressor blades in gas turbine engines. Manufactured products will have application in a range of fixed and rotary wing aircraft.

"Training is a strategic part of our growth plan," said Mr. Rodger. "With Holland College Aerospace Centre next door, we know that our employees will receive the proper technical training required."
